

Healthy Petz Veterinary Clinic
109 Enola Road Morganton NC 28655

Authorization for Medical, Anesthesia and/or Surgical Procedure

I hereby authorize and direct the veterinarians of Healthy Petz Veterinary Clinic to perform the procedures and additional diagnostic and/or treatment procedures as deemed advisable or necessary for my pet.

The nature of the procedure(s) has been explained to me and no guarantee has been made that my pet will get better or be cured. I understand that there may be risk involved in the procedures: including the risk and complications with anesthesia and/or surgery.

We may need to contact you today. How may we readily reach you or a responsible agent?

LAB AND PAIN MEDICINE CONSENT

Even though dogs and cats look normal on the outside; could they have a serious problem on the inside? We can run a laboratory blood panel to check things like blood sugar, liver enzymes and kidney values. If the red blood cells are too low, the kidney values too high or the liver is stressed, then by placing them under anesthesia may jeopardize their life.

We can check your animal's blood prior to anesthesia and surgery. We suggest a CBC and six chemistries plus electrolytes for \$76.00.

Check below:

- YES**, I would like lab work performed on my pet.
- NO**, I do not want lab work performed on my pet.

PAIN MEDICINE

Post surgical pain management can decrease time necessary for recovery from surgery. For most routine procedures 3 day of pain medicine is adequate. The pain medicine is dosed according to weight of you animal. An approximate cost is \$12.00 to \$20.00 for dogs. Cats \$12.50 to \$14.00 (Pain medicine is included with the price for declaw surgery.)

- YES**, I want my pet to receive a prescription of post surgical pain medicine.
I realize that there is an additional charge.
- NO**, I do not want my pet to receive a prescription at this time.

MICROCHIP

Save This Life is a bar code chip that is inserted underneath the skin. When the chip is scanned and the information is registered, the pet can be traced to the owner. This is not a GPS chip, however if the person finding your pet enters the number into GOOGLE, the information is emailed and/or texted to the registered information giving quicker recovery of your pet.

The cost of the microchip and injection is \$42.50

- YES**, I want my pet to receive the microchip.
- NO**, I do not want my pet to receive the microchip.

Dental Services

Here is some information about the dental services offered today for your pet.

Older patients should have blood work run to detect any problems with their organs such as kidney and liver function, abnormal glucose or anemia. Older pets should also have an IV placed, and fluids given while under anesthesia.

Once the pet has been anesthetized we will explore and evaluate the mouth and all teeth. Most of the time the teeth just need to be cleaned and polished, however sometimes we need to perform tooth x-rays to determine the condition of the underlying roots. Occasionally the tooth/teeth are in poor shape and need to be extracted (removed). Each animal will be different depending on the degree of dental problems. Some teeth can be saved with root canals. We do not perform root canals here, but would be happy to refer you to a veterinary dental specialist if you are interested.

Cost Estimate:

Pre Anesthesia Blood work run here \$76.00

Anesthesia, hospitalization, cleaning/polishing and IV fluids \$160 – 225

Tooth x-rays \$85.00

Extractions can range from \$10 for a simple tooth with one root to \$45 for a complex tooth with multiple roots.

Antibiotics and pain medication \$20 – 40

****We do not perform root canals, fillings, or crowns here****

If you would prefer to limit us from any of the above listed services, or have a monetary limit please write that in the spaces provided below and sign.
